

FREEDOM

THE ULTIMATE VIRTUAL EFFECT RACK

FREEDOM enters a totally new dimension for the entire mastering and post production of your songs, scores and sound recordings.

The extremely intuitive and easy-to-use rack functionality gives you immediate access to over 40 premium filters and effects, including yellow tools' sophisticated Impulse Response processor "Origami LE" with 25 IR models and audio import option. FREEDOM offers three independent snapshot slots. You can add an unlimited number of insert effects to each slot and easily change their order per drag'n'drop.

FREEDOM: Overview

With the introduction of FREEDOM the first pure software product of yellow tools is released.

With the establishment of their own software development department a few years ago yellow tools achieved in shortest time an enormous technological know-how in the area of audio software engineering and developed with FREEDOM an absolute high-end filter and effect plug-in for the premium segment.

FREEDOM enters a totally new dimension for the entire mastering and post production of your songs, scores and sound recordings.

The extremely intuitive and easy-to-use rack functionality gives you immediate access to over 40 premium filters and effects, including yellow tools'

sophisticated Impulse Response processor "Origami LE" with 25 IR models from the company "INSPIRED ACOUSTICS" and an audio import option. FREEDOM offers three independent snapshot slots. You can add an unlimited number of insert effects to each slot and easily change their order per drag'n'drop. For a most intuitive workflow, the order of your insert effects in the rack corresponds exactly to the progression of your audio input signal.

FREEDOM supports full "No Loss Patch Compatibility": Regardless of your preferred platform or host application - FREEDOM enables you to save all your effect setups and snapshots as "No Loss" presets and to transfer them to other host applications or platforms.

FREEDOM comes with an outstanding and innovative host and MIDI automation including the additional parameters "invert", "bypass", "host learn" and "MIDI learn". All speed-related filters and effects of FREEDOM can be synchronized comfortably to the speed of your

sequencer software (host) - even with different extended sync modes.

Based on yellow tools' innovative "Advanced Effect Technology" (A.E.T.) FREEDOM offers the most powerful effects with lowest CPU usage.

FREEDOM'S PREMIUM FILTERS & EFFECTS:

IMPULSE RESPONSE PROCESSOR

- ORIGAMI LE & STAGE POSITIONER

EQUALIZERS:

- 4 BAND PARAMETRIC EQ
- 6 BAND PARAMETRIC EQ
- VINTAGE 3 BAND EQ
